

CLAIMS

1. Device for feeding of toner powder to a manifold apparatus (1) comprising at least one toner container (2), which device (3) comprises at least one receptacle (4) for toner powder, a feeding device (5) and a delivery conduit (6) in communication with the receptacle (4), characterized in that the feeding device (5) is mechanical and that the delivery conduit (6) is arranged with a non-apparatus adapted connection means and intended to be connected to the toner container (2) of the manifold apparatus (1), which toner container (2) is of optional design.
2. Device according to claim 1, characterized in that the delivery conduit (6) is intended to be connected to a communication path into the toner container (2), which communication path is opened at an initial connection of the device to the manifold apparatus (1).
3. Device according to any of the preceding claims characterized in that the feeding device (5) comprises a timer function intended to control the feeding device.
4. Device according to any of the preceding claims characterized in that the feeding device (5) is provided by a conveying screw.
5. Device according to any of the claims 1-3, characterized in that the feeding device (5) is a piston assembly (20, 22) arranged for reciprocating motion for feeding of toner powder to the toner container (2).
6. Device according to any of the claims 1-3, characterized in that the feeding device (5) is a conveyor belt (30) rotatable around at least two rollers (32), an operating device capable of rotating the belt for feeding of toner powder to the toner container (2).
7. Device according to any of the claims 1-3, characterized in that the feeding device (5) is a vibrating device (40, 42, 44) capable of feeding toner powder to the toner container (2) by an oscillating movement.

8. Device according to any of the preceding claims characterized in that the receptacle (4) is exchangeable.
9. Device according to any of the preceding claims characterized in that an exchangeable PET-bottle is connected to the receptacle (4) for refilling of the receptacle.
10. Device according to any of the preceding claims characterized in that an exchangeable foiled carton is placed in the receptacle (4) for refilling of the receptacle.
11. Device according to any of the preceding claims characterized in that the receptacle (4) is arranged outside the manifold apparatus (1).
12. Method for feeding of toner powder from a device (3) to a manifold apparatus (1) comprising at least one toner container (2), which device (3) comprises at least one receptacle (4) for toner powder, a feeding device (5) and a delivery conduit (6) in communication with the receptacle, characterized in that the delivery conduit (6), which is arranged with a non-apparatus adapted connection means, is connected to a communication path into the toner container (2), which communication path is opened in connection with an initial connection of the device (3) to the manifold apparatus (1).
13. Toner container designed with devices for connection of a device according to any of the claims 1-11.
